Dear Colleagues,

Endoscopic surgery is one of the most innovative application in the field of surgery. It has efficaciously permeated in all the branches of surgery. It is recognized as a safe, effective and patient-friendly treatment modality that has numerous advantages, to name a few are smaller incision, less hemorrhage shorter recovery time etc. But it also requires skill and safe hand for the procedure to be successful.

The advent of 3D endovision system has added a new feather in the surgeons operational experience. Exact depth perception inside the human body is essential for any endoscopic procedure. The new 3D system offers the surgeon excellent depth of field combined with outstanding hand-eye coordination. It's valuable for activities that demand high degree of spatial perception.
